GENERAL INFORMATION:

SIMPLWINDOWS NAME:	Qsys Generic Trigger Component Control
CATEGORY:	Qsys
VERSION:	5.0.0
SUMMARY:	Controls and monitors a single trigger (momentary) control of any Q-SYS component (e.g. a trigger button that loads a snapshot or fires a script). The control is identified by the component's Code Name and the control's name within that component.
GENERAL NOTES:	Trigger acts on the rising edge only and sends a value of 1 to the control. This module has no feedback.
CRESTRON HARDWARE REQUIRED:	3 Series Processor or 4 Series Processor
SETUP OF CRESTRON HARDWARE:	Requires a Qsys Core module in the same program with a matching CoreID.
VENDOR FIRMWARE:	N/A
VENDOR SETUP:	The Q-SYS component that owns the control must have a Code Name set in its Properties, and Script Access set to External (or All). Enter that Code Name in the ComponentName parameter. ComponentControlName is the control's name inside that component as Q-SYS exposes it to external control (the name shown in the control's tooltip / Control Info in Q-SYS Designer, e.g. "gain", "mute"). It is case sensitive.
GENERATION:	Generated by Claude Code from SIMPL+ and SIMPL# source files

CONTROL:

Trigger	D	Pulse to fire the trigger control in Q-SYS.

FEEDBACK:

N/A		

PARAMETERS:

CoreID	S	Used to address this module to the Qsys Core module with the same CoreID. Default: 1
ComponentName	S	Code Name of the Q-SYS component that contains the control.
ComponentControlName	S	Name of the control within the component to be controlled.

TESTING:

SAMPLE PROGRAM:	3-Series: 3 Series Test.smw 4-Series: 4 Series Test.smw
REVISION HISTORY:
